

The U.S. Government and International Family Planning & Reproductive Health Efforts

Key Facts

- Improving access to family planning and reproductive health (FP/RH) services globally can help prevent maternal deaths and reduce unintended pregnancies. Each year, an estimated 303,000 women die from complications during pregnancy and childbirth, almost all in developing countries. Approximately one-third of maternal deaths could be prevented annually if women who did not wish to become pregnant had access to and used effective contraception. Worldwide, 214 million women have an unmet need for modern contraception.
- The U.S. government (U.S.) has supported global FP/RH efforts for 50 years and is the largest donor to FP/RH in the world. It is also one of the largest purchasers and distributors of contraceptives internationally.
- Over time, the U.S. role in global FP/RH has changed, sometimes influenced by differing views and political debates related to FP/RH that have arisen both domestically and internationally. Historically, these debates have concerned both the amount of U.S. funding provided to global FP/RH as well as its use, particularly related to abortion.
- Total U.S. funding for FP/RH, which includes the U.S. contribution to the United Nations Population Fund (UNFPA), was \$608 million in FY 2018, up from \$425 million in FY 2006; however, the current Administration has withheld the U.S. contribution to UNFPA for FY 2017 and FY 2018 due to the Kemp-Kasten Amendment. Additionally, it proposed eliminating FP/RH funding for FY 2018 (though Congress ultimately held funding level) and has proposed reducing it significantly for FY 2019.
- U.S. funding for FP/RH is governed by several legislative and policy restrictions, including a legal ban on the direct use of U.S. funding overseas for abortion as a method of family planning (which has been in place since 1973) as well as more stringent restrictions in some years, such as President Trump's January 2017 reinstatement and expansion of the Mexico City Policy.

Global Situation

Access to family planning and reproductive health (FP/RH) services is critical to the health of women and children worldwide. Improving access to FP/RH services globally can help prevent maternal deaths and reduce unintended pregnancies. Each year, approximately 303,000 women die from complications during pregnancy and childbirth, almost all in developing countries.¹ It is also estimated that approximately one-third of maternal deaths could be prevented annually if women who did not wish to become pregnant had access to and used effective contraception.²

Family Planning (FP): The ability of individuals and couples to anticipate and attain their desired number of children and the spacing and timing of births.³

Reproductive Health (RH): The state of complete physical, mental, and social well-being, and not merely the absence of disease or infirmity, in all matters relating to the reproductive processes, functions, and system at all stages of life.⁴

Key Factors

Key factors contributing to maternal deaths and unintended pregnancy include:⁵

- unmet need for FP services;
- high adolescent birth rates, since adolescents (ages 15-19) are more likely to die or face complications during pregnancy and childbirth;
- lack of access to antenatal care, which increases the risk of complications during pregnancy and childbirth; and
- unsafe abortions, which are those performed by individuals without the necessary skills or in an unsanitary environment and often lead to complications and death.

Worldwide, 214 million women have an unmet need for modern contraception (i.e., they do not wish to get pregnant and are using no contraceptive method or a traditional method).⁸ Access to FP methods, including traditional methods, varies significantly by region (see Table 1). Unmet need for FP is highest in

Table 1: Key Family Planning/Reproductive Health (FP/RH) Indicators by Region⁶

Region ⁷	Unmet Need for FP (%) 2018	Contraceptive Prevalence (%) 2018	Adolescent Birth Rate (per 1,000) 2018	Women's SRH Decisionmaking [^] (%) 2013
Global	11.6	62.6	43.9	53.4
Least Developed Countries	21.0	40.8	91.2	49.0
Sub-Saharan Africa	23.2	31.5	101.4	46.7
Northern Africa	13.9	54.9	41.6	--
Western Asia	14.0	57.9	39.5	70.7
Central Asia	13.1	58.0	24.3	57.0
Southern Asia	13.1	56.3	32.1	47.7
Eastern Asia	4.7	81.1	5.9	--
South-Eastern Asia	12.1	63.6	44.3	69.6
Latin America and the Caribbean	9.6	74.3	61.3	67.7
Oceania*	15.1	57.8	48.0	--
Europe	9.1	69.3	13.2	79.8
North America	7.0	73.5	18.0	--

NOTES: ^ means SRH is sexual and reproductive health; indicator reflects Proportion of Women Who Make Their Own Informed Decisions Regarding Sexual Relations, Contraceptive Use, and Reproductive Health Care. -- means data not available. * means Oceania excluding Australia and New Zealand.

regions like sub-Saharan Africa and Oceania where contraceptive prevalence is low.⁹ Adolescent fertility rates have declined slowly and remain particularly high in sub-Saharan Africa, where child marriage remains common, and in Latin America and the Caribbean.¹⁰ While the percentage of pregnant women receiving the recommended minimum number of four antenatal care visits has been on the rise, it is 52% in developing countries and lower still in sub-Saharan Africa and Southern Asia.¹¹ Each year, approximately 47,000 women die from complications associated with unsafe abortion.¹² Access to and use of effective contraception reduces unintended pregnancies and the incidence of abortion.¹³

Reasons for the lack of access to and, in some cases, utilization of FP/RH services include low awareness of the risks of sexual activity, such as pregnancy and HIV; cost; gender inequality; and laws in some countries that require women and girls to be of a certain age or have third party authorization, typically from their husband, to utilize services.¹⁴ See Table 1.

Interventions

FP/RH encompasses a wide range of services that have been shown to be effective in decreasing the risk of unintended pregnancies, maternal and child mortality, and other complications. These include:

- birth spacing;
- contraception;
- sexuality education, information and counseling;
- post-abortion care;
- screening/testing for HIV and other sexually transmitted diseases (STDs);
- repair of obstetric fistula;
- antenatal and postnatal care;
- genital human papillomavirus (HPV) vaccine to prevent cervical cancer and genital warts; and
- research into new methods such as microbicides.¹⁵

Global Goals

There are several key global goals for expanding access to and improving FP/RH services, including:

SDG 3: ACHIEVING UNIVERSAL ACCESS TO REPRODUCTIVE HEALTH

This goal, adopted in 2015 as part of Sustainable Development Goal (SDG) 3 - “ensure healthy lives and promote well-being for all at all ages,” is to “ensure universal access to sexual and reproductive health care services, including for family planning, information, and education, and the integration of reproductive health into national strategies and programmes.”¹⁶ The SDGs are the successor to the Millennium Development Goals (MDGs), which also included this goal as a specific target under MDG 5 (improve maternal health).¹⁷

FP2020: PROVIDING ACCESS TO VOLUNTARY FP TO AN ADDITIONAL 120 MILLION WOMEN

In July 2012, the government of the United Kingdom and the Bill & Melinda Gates Foundation – in partnership with the United Nations Population Fund (U.N. Population Fund or UNFPA), civil society organizations, developing countries, donor governments, the private sector, and multilateral organizations – co-sponsored the London Summit on Family Planning, an effort to provide voluntary family planning services to an additional 120 million women and girls in developing countries by 2020 through new commitments. This goal is being monitored by Family Planning 2020 (FP2020), a global partnership created as an outcome of the Summit. In July 2017, the second London Summit on Family Planning reviewed progress made thus far.¹⁸

U.S. Government Efforts

The U.S. has a long history of engagement in international family planning and population issues, and today, the U.S. government is the largest donor to global FP/RH efforts and is one of the largest purchasers and distributors of contraceptives internationally.²⁰ Congress first authorized research in this area in the Foreign Assistance Act of 1961.²¹ In 1965, the U.S. Agency for International Development (USAID) launched its first FP program and, in 1968, began purchasing contraceptives to distribute in developing countries. In the 1980s, USAID programs expanded to address maternal, newborn, and child health as well as the relationship between population, health, and the environment; and in the 1990s, USAID FP/RH programs began to recognize the need for male involvement in FP/RH and focus on the needs of young people.²² More recently, the U.S. adopted a longer term global health goal of ending preventable child and maternal deaths by 2035 and highlighted the important role of FP/RH efforts in achieving this goal.²³ U.S. funding for FP/RH is governed by several legislative and policy restrictions, including a legal ban on the direct use of U.S. funding overseas for abortion as a method of family planning (which has been in place since 1973) as well as more stringent restrictions in some years, such as the Mexico City Policy (see below).

Organization

USAID has long served as the lead U.S. agency for FP/RH activities, with other agencies also carrying out FP/RH activities.

USAID

USAID operates FP/RH programs in more than 30 countries, with a focused effort in 24 priority countries that are mostly in Africa and Southern Asia.²⁴ The agency’s stated FP/RH objective is to help countries meet the FP/RH needs of their people.²⁵ It does this by expanding sustainable access to

Table 2: U.S. Government-Funded Family Planning/Reproductive Health (FP/RH) Interventions¹⁹

• Addressing child marriage
• Addressing gender-based violence
• Biomedical and contraceptive research and development
• Contraceptive supplies and their distribution
• Contributions to UNFPA*
• Counseling and services such as birth spacing
• Eliminating female genital mutilation
• Financial management
• Linking FP with HIV/AIDS & STD information/services
• Linking FP with maternity services
• Post-abortion care
• Prevention and repair of obstetric fistula
• Public education and marketing
• Sexuality & reproductive health education
• Training of health workers
NOTES: * means U.S. support for UNFPA has been withheld during FY 2017 and FY 2018 due to the Kemp-Kasten Amendment.

quality voluntary FP/RH services, commodities, and information (see Table 2) that enhance efforts to reduce high-risk pregnancies; allow sufficient time between pregnancies; provide information, counseling, and access to condoms to prevent HIV transmission; reduce the number of abortions; support women's rights; and stabilize population growth.²⁶ These efforts aim to contribute to the global goal of reaching more than 120 million more women and girls in the world's poorest countries with access to voluntary FP information, contraceptives, and services by 2020.²⁷

OTHER U.S. FP/RH EFFORTS

Also carrying out FP/RH efforts are the **Centers for Disease Control and Prevention (CDC)** (research, surveillance, technical assistance, and a designated World Health Organization Collaborating Center for Reproductive Health);²⁸ the **Department of State** (diplomatic and humanitarian efforts); the **National Institutes of Health (NIH)** (research); and the **Peace Corps** (volunteer activities).

Additionally, USAID's FP/RH and maternal and child health (MCH) efforts are closely linked, although Congress directs funding to and USAID operates these programs separately. Recent years have also seen greater emphasis on coordinating FP/RH investments with global HIV efforts through the President's Emergency Plan for AIDS Relief (PEPFAR).²⁹ See the KFF [fact sheet](#) on U.S. MCH efforts and the KFF [fact sheet](#) on U.S. PEPFAR efforts.

MULTILATERAL EFFORTS

The U.S. works with several international institutions, partnerships, and other donors to carry out FP/RH efforts. Among them are the U.N. Population Fund (UNFPA, the largest purchaser and distributor of contraceptives worldwide – though the current Administration has determined the U.S. will withhold its contribution to UNFPA in FY 2017 and FY 2018; see below); Family Planning 2020 (FP2020, an international partnership to expand access to family planning services in which the U.S. is a core partner); and the Global Financing Facility (GFF, a partnership to improve the health of women, children, and adolescents through innovative financing in which the U.S. is an investor).³⁰

Funding³¹

Total U.S. funding for FP/RH, which includes the U.S. contribution to UNFPA, has increased from \$425 million in FY 2006 to \$608 million in FY 2018 (see Figure 1). However, the current Administration has withheld the U.S. contribution to UNFPA for FY 2017 and FY 2018 due to the Kemp-Kasten Amendment.³² Additionally, it proposed eliminating FP/RH funding for FY 2018,³³ though Congress ultimately held funding level, and has proposed significantly reducing FP/RH funding for FY 2019.

Most U.S. funding for FP/RH is part of the Global Health Programs account at USAID, with additional funding provided through the Economic Support Fund account. FP/RH funding is also provided through the International Organizations & Programs account at the Department of State for the U.S. contribution to UNFPA. Under current U.S. law, any U.S. funding withheld from UNFPA is to be made available to other family planning, maternal health, and reproductive health activities.³⁴

Requirements in Law and Policy³⁵

Legal, policy, and programmatic requirements for U.S. funding for international FP include (also see the KFF [fact sheet](#) on these and other requirements):

HELMS AMENDMENT

Since 1973, through the Helms Amendment, U.S. law has prohibited the use of foreign assistance to pay for the performance of abortion as a method of family planning or to motivate or coerce any person to practice abortion.

MEXICO CITY POLICY

First instituted by President Reagan in 1984 through executive order, the Mexico City Policy (the "Global Gag Rule") required foreign non-governmental organizations (NGOs) to certify that they would not perform or promote abortion as a method of family planning using funds from any source as a condition for receiving U.S. funding. A highly debated issue, this policy was rescinded by President Clinton, reinstated by President Bush, rescinded by President Obama, and reinstated – in an expanded form – by President Trump in January 2017. The current Administration's application of the policy extends to the vast majority of U.S. bilateral global health assistance, including funding for FP/RH, HIV under PEPFAR, maternal and child health, malaria, nutrition, and other programs; in past iterations, it applied to family

planning assistance only. Under the current administration, the policy has been renamed “Protecting Life in Global Health Assistance.” See the KFF [explainer](#) on the Mexico City Policy.

UNFPA & THE KEMP-KASTEN AMENDMENT

Although the U.S. government helped create the U.N. Population Fund (UNFPA) in 1969 and was a leading contributor for many years, there have been several years in which funding has been withheld due to executive branch determinations that UNFPA’s activities in China violated the Kemp-Kasten Amendment, which prohibits funding any organization or program, as determined by the President, that supports or participates in the management of a program of coercive abortion or involuntary sterilization.³⁶ In January 2017, President Trump directed the U.S. Secretary of State to “take all necessary actions” to implement the Kemp-Kasten Amendment, and for two years now (FY 2017 and FY 2018), the Administration has withheld funding for UNFPA by citing the Kemp-Kasten Amendment.³⁷ See the KFF [explainer](#) on UNFPA funding and the Kemp-Kasten Amendment.

VOLUNTARISM AND INFORMED CHOICE

The principles of ensuring voluntary use of FP/RH services as well as informed choice of FP/RH options are specified in legislative language and program guidance.

Key Issues for the U.S.

In recent years, growing global attention has highlighted the need to augment FP/RH services worldwide and increase coverage and access. As the global community endeavors to support and fund efforts to achieve SDG 3’s FP/RH targets, the future of U.S. FP/RH efforts is more uncertain, with questions about the extent to which the current Administration will support FP/RH efforts (given the Jan. 2017 reinstatement and expansion of the Mexico City Policy, its Kemp-Kasten determinations regarding UNFPA, and recent budget requests to eliminate or significantly reduce FP/RH funding), and the strength of bipartisan support in Congress for FP/RH. Policy debates and discussions within and among Congress and the current Administration regarding the U.S. role in FP/RH (such as its role in fostering progress toward global goals related to providing access to FP/RH services) and the amount and use of U.S. funding (including legal and policy requirements) are likely to continue. Other key issues and challenges for U.S. efforts include:

- continuing support for FP/RH efforts in order to expand access to and ensure the quality of FP/RH services;
- reaching the most vulnerable;
- supporting advances in research and uptake of new technologies;
- further integration of FP/RH efforts with other U.S. global health programs (such as maternal and child health and global HIV under PEPFAR) and broader U.S. development efforts (including education); and
- coordinating these efforts with the activities of other donors and partner countries in order to maximize the impact of available resources.

This addition to MDG 5 was a recognition by governments and world leaders of the need to address challenges related to access and utilization of RH services. The world did not reach this target, but some progress was made, with more women attending a health provider four times or more during pregnancy and using contraceptives, though these indicators still vary widely across regions.
