

U.S. Global Health Budget: Malaria/PMI

The U.S. government has been involved in global malaria activities since the 1950s and, today, is the second largest donor to global malaria efforts in the world (the largest is the Global Fund to Fight AIDS, Tuberculosis and Malaria). The U.S. response to malaria is driven by the President's Malaria Initiative (PMI), an interagency initiative to address global malaria that is led by the U.S. Agency for International Development (USAID), and co-implemented together with the Centers for Disease Control and Prevention (CDC), with additional activities provided by the National Institutes of Health (NIH) and Department of Defense (DoD). (In addition to its bilateral programs, the U.S. also supports malaria programs through its contribution to the Global Fund to Fight AIDS, Tuberculosis and Malaria). U.S. bilateral funding for malaria increased from \$146 million in FY 2001 to \$974 million in FY 2018, its highest level to date. In FY 2018, malaria accounted for 9% of the U.S. global health budget. The President's FY 2019 request proposes to reduce malaria funding to \$876 million in FY 2019, a 10% decrease.
