# The Uninsured: A Primer

KEY FACTS ABOUT HEALTH INSURANCE AND  
THE UNINSURED IN THE ERA OF HEALTH REFORM

---

SUPPLEMENTAL TABLES

These tables provide detailed information about health insurance coverage among the U.S. nonelderly population in 2015. Detailed national tables examine health insurance coverage and characteristics of the uninsured population by key social and economic determinants, including:

- Age
- Gender
- Family income and poverty levels
- Household type
- Family work status
- Education
- Race/ethnicity
- Citizenship
- Health status

National tables are provided for the total nonelderly population, with additional separate tables for these groups:

- Children
- Nonelderly adults
- Nonelderly adult women
- Nonelderly adult men
- Nonelderly below poverty (<100% FPL)
- Low-income Nonelderly (100-200% FPL)

In addition, two national tables describe health insurance coverage and characteristics of nonelderly adult workers (age 19-64) and examine uninsured nonelderly adult workers by these additional factors:

- Work status
- Business size
- Occupation
- Industry

For state-by-state coverage tables, please visit [State Health Facts](#).

## Table Endnotes

- <sup>a</sup> Nonelderly includes all individuals under age 65.
- <sup>b</sup> The private coverage category excludes a small number of people with private coverage of an unknown source.
- <sup>c</sup> Other includes other public insurance (mostly Medicare and military-related). CHIP is included in Medicaid.
- <sup>d</sup> The U.S. Census Bureau's poverty threshold for a family with two adults and one child was \$19,078 in 2015. This is the official measurement of poverty used by the federal government and the definition used in these tables.
- <sup>e</sup> Parent includes any person with a dependent child.
- <sup>f</sup> Multigenerational/other families with children include families with at least three generations in a household, plus families in which adults are caring for children other than their own (e.g., a niece living with her aunt).
- <sup>g</sup> Part-time workers were defined as working < 35 hours per week.
- <sup>h</sup> Respondents can identify as more than one racial or ethnic group. The hierarchy we use for determining racial/ethnic categories places all respondents who self-identify as mixed race who do not also identify as Hispanic into the "Two or More Races" category. All individuals who identify with Hispanic ethnicity fall into the Hispanic category regardless of selected race.
- <sup>i</sup> Children includes all individuals under age 19.
- <sup>j</sup> Nonelderly adults includes all individuals aged 19-64.
- <sup>k</sup> Adult workers includes workers aged 19-64.
- <sup>l</sup> Worker's income only; does not include income from other family members or other sources.
- <sup>m</sup> Self-employed includes only the self-employed who are working in firms with fewer than 50 workers.
- <sup>n</sup> A small percentage (<1%) of workers are former military and are included in "Other Occupations" and "Total Workers" totals.
- <sup>o</sup> Other occupations include the following types of jobs: assistants, clerical workers, technicians, repair workers, artists, entertainers, sports-related workers, service workers, laborers, salespersons, operators (equipment, including drivers), skilled trade workers, and assemblers.

## Data Notes

The data in the tables is based on analysis of the Census Bureau’s March Supplement to the Current Population Survey (the CPS Annual Social and Economic Supplement or ASEC). The CPS-ASEC is a leading source of data on health insurance coverage in the United States. Though other data sources provide somewhat more recent snapshots of insurance coverage,<sup>1</sup> the CPS-ASEC provides detailed information on respondents’ income, work status, and family structure, and it also enables state-level analysis for all fifty states.

In recent years, the Census Bureau has made several changes to the CPS ASEC.<sup>2</sup> Most notably, with the 2014 data release, Census implemented a fundamental redesign of the health insurance coverage questions in the ASEC. This redesign aimed both to address longstanding issues with measurement of insurance coverage in the ASEC and to capture new coverage categories available under the ACA. The redesigned insurance questions led to a lower estimate of the uninsured rate than the previous approach, addressing a longstanding issue of under-reporting of coverage in the ASEC.<sup>3,4</sup> As a result of these changes, health coverage data for the 2014 release (reflecting coverage in calendar year 2013) are not comparable with estimates from previous years.

The current ASEC asks respondents about their health insurance coverage at the time of the interview and throughout the previous calendar year. The data in this report draw on estimates of coverage in the previous calendar year. Respondents may report having more than one type of coverage. In this analysis, individuals are sorted into only one category of insurance coverage using the following hierarchy:

- **Medicaid:** Includes those covered by Medicaid, the Children’s Health Insurance Program (CHIP), and those who have both Medicaid and another type of coverage, such as dually-eligible individuals who are also covered by Medicare.
- **Employer:** Includes those covered by employer-sponsored coverage either through their own job or as a dependent of someone in their household.
- **Other Public:** Includes those covered under the military or Veterans Administration as well as nonelderly Medicare enrollees.
- **Non-Group:** Includes individuals and families that purchased or are covered as a dependent by non-group insurance obtained on the Marketplaces or via direct purchase from an insurer.
- **Uninsured:** Includes those without health insurance and those who have coverage under the Indian Health Service only.

For example, a person having Medicaid coverage in the first half of the year but employer-based coverage in the last months of the year would be categorized as having Medicaid coverage in this analysis.

In most of this analysis, estimates of family income (mostly categorized as a percent of the federal poverty level) are based on Census-defined family units. A family unit includes all related individuals living together in a household. Analyzing income by family unit captures income available to a group of people who are likely sharing resources. However, family units may not be the appropriate measure for capturing eligibility for health insurance. Eligibility for health insurance is more accurately captured using “health insurance units,” and health insurance units may be counted differently for different types of insurance (such as Medicaid or employer coverage). Kaiser Family Foundation estimates of eligibility for health coverage are reported elsewhere.<sup>5</sup>
