# THE KAISER FAMILY FOUNDATION SURVEY OF RACE, ETHICITY AND MEDICAL CARE: PUBLIC PERCEPTIONS AND EXPERIENCES 

National Topline

## Methodology:

The Kaiser Family Foundation Survey of Race, Ethnicity and Medical Care: Public Perceptions and Experiences is based on a national random sample of 3,884 telephone interviews with adults age 18 and over including 1,479 whites, 1,189 African Americans and 983 Latinos. Interviews were completed both in English and Spanish according to the preferences of the respondent. The survey was designed and analyzed by researchers at the Foundation, and conducted by Princeton Survey Research Associates between July 7 and September 19, 1999. The margin of error is $+/-3 \%$ for results based on the full sample, $+/-4 \%$ for the subsample of whites, $+/-4 \%$ for African Americans and $+/-6 \%$ for Latinos. (Margin of error is larger for smaller subsamples of respondents). Note that in addition to sampling error there are other possible sources of measurement error.

Note: VOL means response was volunteered by respondent, not an explicitly offered choice. Some questions were asked of random split-halves of the respondents (referred to as Form 1 and Form 2). An * indicates values of less than one percent, and " n " refers to the actual number of people asked a given question. Percentages are based on weighted data; sample and subsample sizes reflect unweighted counts. Percentages may not total exactly $100 \%$ due to rounding.

Q1 I have some questions about issues facing our country today. For each issue I read please tell me if you think it is a major problem facing our country, a minor problem or not a problem at all.

| Major |
| :---: |
| problem |

| Minor |
| :---: |
| problem |

| Not a |
| :---: |
| problem at |
| all | | (Don't <br> know) |
| :---: |

a unemployment
